

TRAINING

AppClarity

Immediate reduction in software costs

Implementing and using AppClarity

This is an instructor-led course designed to equip technical people responsible for implementing AppClarity into a customer environment with the required knowledge and basic experience. The course is conducted over two days. It includes a primer for ActiveEfficiency, the platform on which AppClarity is built, and covers the basics of software entitlement management, concepts, AppClarity architecture and plenty of hands-on exercises to get experience installing, configuring and using AppClarity to drive down software license costs.

Target audience

This course is suitable for:

- Technical staff responsible for the implementation of AppClarity
- Technical staff who require a sound technical understanding of how the features of AppClarity deliver software license optimization

Learning outcomes

This course aims to provide delegates with:

- An understanding of the challenges of managing software waste and how these are addressed by AppClarity
- The ability to clearly describe how AppClarity works at a detailed level
- The ability to design and implement the features of AppClarity to address specific customer requirements
- Hands-on experience installing, configuring and operating AppClarity to achieve reduction in software waste

Required knowledge and experience

Delegates attending this course are expected to be familiar with:

- Implementation and configuration of Microsoft Internet Information Server
- Implementation and configuration of Microsoft SQL Server
- Basic SQL database management using the SQL Server Management Studio
- Using Microsoft System Center Configuration Manager for Inventory, Software Usage Management and Software Distribution
- Manipulation of data in CSV file format

Course outline

The following topics are covered in this course:

- Understanding the problem
- ActiveEfficiency Primer
 - Installing ActiveEfficiency (lab)
 - Scouting for devices and applications (lab)
 - Scouting for information from servers (lab)
 - Using the ActiveEfficiency Agent (lab)
- AppClarity Architecture and Implementation
 - Installing AppClarity (lab)
 - Connecting and integrating with ActiveEfficiency (lab)
- Applications, Products and Licenses
 - Exploring Applications, Products and Installations (lab)
- Management Groups
 - Working with Management Groups (lab)
- Entitlement Management
 - Entitlement Management (lab)
- Software Reclaim
 - Reclaiming unused software (lab)
