

Tachyon

Real-time response

Tachyon enables real-time response. It empowers both security and IT operation teams to investigate incidents in context and remediate any endpoint, anywhere, at scale.

“From an information retrieval point of view, Tachyon is a bit like the Google of your whole IT landscape.”

“ **Kurt De Ruwe**
CIO, Signify (formerly
Phillips Lighting)

The solution to the remediation crisis

The remediation crisis

99% of exploited vulnerabilities have been known by IT for at least 1 year.
The average remediation time once an incident has been identified is 10 weeks.

Strong existing detection capabilities create significant quantities of remediation tasks for IT who cannot remediate vulnerabilities and incidents quickly enough. Workloads pile up, risk increases and known vulnerabilities are exploited despite the organization being aware of the remediation required.

The Tachyon solution

1 Investigate in context

Tachyon changes the way Security investigates vulnerabilities and incidents by providing them with live data from all endpoints in real time and enhances the investigation with organizational context.

2 Remediate all your endpoints

Tachyon enables real and meaningful Remediation. IT Security are better equipped to communicate remediation requirements to IT Operations who can test and remediate complex issues, globally, in seconds.

3 Learn and automate

IT SecOps can integrate learnings from incident resolution in organizational knowledgebase and automate the resolution process with tight integration into existing infrastructure and processes.

Business Benefits

Safer Endpoints

Reduce incident volume by improving “Protect” capabilities. Security and IT Operations can investigate and remediate faster, more easily and with greater shared context and co-operation.

Increased IT Capacity

Tachyon works with existing tools like Splunk, ServiceNow and SCCM for greatly enhanced integrated automation capabilities. Free up IT staff to deal with new complex issues.

Productive Users

Whether in the office or working remotely, users have fewer interruptions and no performance impact while safe in the knowledge that their endpoints and data are well protected and secure.

Key Features

Scalable

- Designed to support up to 1.5 million simultaneous endpoint connections
- Tachyon can scale to deal with the largest organizations

Designed for how we work today

Office workers, home workers, remote workers on coffee shop WiFi – it doesn't matter. Tachyon ensures your endpoints are always connected.

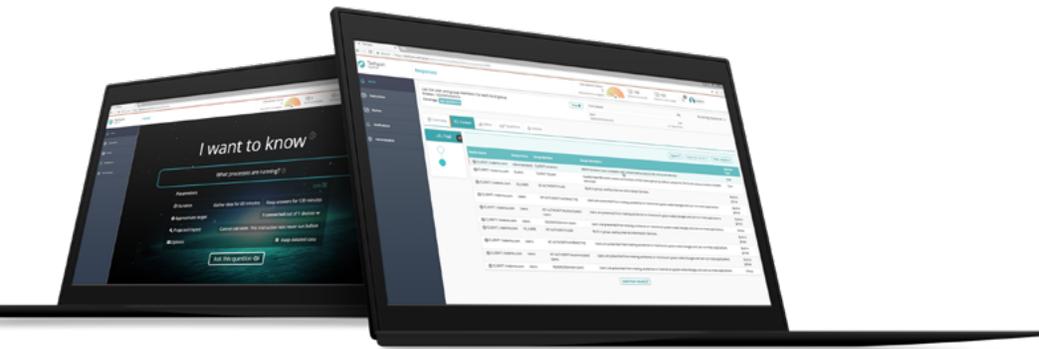

Extensible

Whatever data you need, whatever remediation is required. Flexible enough to rise to any challenge. Security can define HOW to resolve an issue – Operations can TEST and DEPLOY the solution in minutes.

Open

With a fully defined RESTful API, integration and automation is simple. Interoperate with ServiceNow, Splunk, SCCM, etc. to ensure changes are recorded, data is shared and policy based systems are kept up-to-date.

Who we are

Modern users expect a mobile-like experience, with self-service and instant results.

1E enables IT to deliver comprehensive self-service and respond in real-time by augmenting Microsoft and ServiceNow solutions. Over 1000 organizations trust 1E to meet their user, business, and security needs. Your employees are important; they deserve 1E managed endpoints.
